Income Tax Study

PURPOSE OF REPORT

The purpose of this report is to analyze the estimated amount of additional income tax that could be collected and the potential tax impact to both income tax payers and property tax payers in the County based upon the new tax legislation contained in House Bill 1478. In preparing our report, we have analyzed a substantial amount of data and made certain assumptions as detailed and presented in our report. We have utilized the most current data available, but it is important to note that more up to date information will be released by the State in the next thirty to sixty days. Our projection of estimated income tax collections is based upon historical information.

The new legislation allows the County to shift the funding of some items from property taxes to income taxes. Since only individuals will pay the new income taxes, there could also be a shift of tax burden from commercial entities to individuals depending on what option is selected. In addition, income taxes are not as stable as property taxes due to the fact that income typically falls during times of recession. Therefore, income taxes require a higher margin of protection (fund balances) for revenue shortfalls than property taxes. Exhibit D estimates the impact to an income tax payer based on different levels of income and new income tax rates.

There are three options available under the new legislation. Option A allows the County to enact a new income tax to be used for one of three property tax credits. Option A1 assumes that the new income tax revenue would be used to provide a property tax replacement credit to all property tax payers. Our analysis for this option is shown in Appendix G. We have estimated the credit based upon the current State PTRC credit and have shown the estimated impact by taxing district.

Option A2 assumes the new income tax revenue would be used to provide an additional homestead credit. Our analysis for this option is shown in Appendix F. We have estimated the impact by taxing district. We have also shown the estimated impact to the owner of a home with an assessed valuation of \$175,000.

Option A3 assumes that the new income tax revenue would be used to provide a property tax credit to all "Qualified" residential property. This credit, unlike the homestead credit, would also apply to apartments and rental properties. The exact amount of Qualified residential property in the County is currently unknown, but, we have assumed an additional 15% of homestead property would receive the credit. Our analysis for this option is shown in Appendix H.

Option B provides that an income tax be established to fund a portion of levy growth. For purposes of our analysis we have excluded debt and cumulative type funds (non rate controlled funds) and all school funds. If Option B is enacted, all levy controlled funds would have their current maximum levies frozen and growth in the levies would be funded by a new income tax. Our analysis of option B is contained in Exhibit J and is based upon the normal maximum levy for Pay 2007 for each entity. We also used three assumptions for levy growth, 3.7%, 4.0% and 4.4% to give the County a range of required income tax rates. The state has provided a larger increase in the Family and Children's Fund and the Children's Psych Fund than the normal levy growth factor. The state has also assumed the full amount for Mental Health of \$767,340 will be included in the levy growth calculation. Option B also requires that the income tax be doubled for the first year to create a rate stabilization fund. It is important to note that Option B does not address the School portion of the property tax rate which is normally the largest portion of the tax rate. We estimate the required rate for Option B would be an additional .2% per year. This would most likely result in a new income tax rate of 1.0% after five years.

Option C allows the County to enact a new income tax for public safety. The legislation includes a wide range of uses defined as public safety, including the funding of police and fire pensions, juvenile detention facilities, county jails, emergency medical services and communications systems. The new revenue would be distributed to County and the cities and towns in County based upon the current COIT distribution formula. Our analysis for this option is shown in Exhibit K. In order to enact an income tax for Option C, an income tax for both Option A and Option B must also be enacted.

Our report is to be used for discussion purposes only. Actual results will vary from the estimates shown and such differences could be material. The new legislation is still being interpreted and the Department of Local Government Finance.

Historical COIT Collections and Distributions

				Special				
Year	Collections	D	istributions	Distributions (1)				
2000	\$ 14,254,407	\$	13,859,538

- (1) Federal Adjusted Gross Income includes all wages, distributions and interest earnings required to be reported on the Federal Tax Return. Social Security is not included for IN taxable income.
- (2) Indiana Exemptions are based upon \$1,000 for each person included on the return plus an additional \$1,500 for each child and an additional \$1,000 for each person over the age of 65 or blind. There are several categories of deductions available to Indiana residents. The primary deduction relates to rent paid for housing and property taxes paid on the taxpayer's residence. Taxpayers cannot claim both deductions and the deduction is limited to \$2,500. For illustration purposes, we have assumed an average total deduction and exemption of \$6,000.

- (1) Federal Adjusted Gross Income includes all wages, distributions and interest earnings required to be reported on the Federal Tax Return. Indiana also allows Social Security to be deducted from Federal AGI.
- (2) Indiana Exemptions are based upon \$1,000 for each person included on the return plus an additional \$1,500 for each child and an additional \$1,000 for each person over the age of 65 or blind. There are several categories of deductions available to Indiana residents. The primary deduction relates to rent paid for housing and property taxes paid on the taxpayer's residence. Taxpayers cannot claim both deductions and the deduction is limited to \$2,500. For illustration purposes, we have assumed an average total deduction and exemption of \$6,000.
